
SKILLS

- Languages: C, C++, C#, Java, Python, TypeScript, JavaScript, SQL, HTML, and CSS.
- Frameworks: .NET (MVC/Web API), React, React Native, Node.js
- Tools & Technologies: IIS, Git, Visual Studio, VS Code, CI/CD pipelines (GitHub Actions, Azure DevOps)
- Software Engineering Concepts: Object-Oriented Programming, MVC, RESTful API, Event-Driven Architecture, Test-Driven Development, Agile Development

PROFESSIONAL EXPERIENCE

Sandhills Global

Scottsdale, AZ

Full Stack Software Engineer

February 2022 – Present

- Led the UI/UX design and development for a new public-facing web application, utilizing React.js to optimize user workflows and interactions, resulting in a 16% increase in user engagement and completion rates
- Redeveloped legacy Visual Basic code into a React TypeScript framework, improving application performance by 35% and enabling better scalability for use by multiple sales divisions across various industries
- Implemented structured practices for peer code reviews and Test-Driven Development (TDD), fostering a culture of high-quality, maintainable, and scalable code while reducing defects and ensuring adherence to industry standards
- Deployed production updates with zero downtime, utilizing CI/CD pipelines to ensure smooth rollouts and minimal disruption to business operations across multiple industry sectors
- Developed new features for internal .NET-based tools, enabling streamlined business operations and driving increased sales efficiency, enhanced system functionality to support equipment sales processes, resolving 10% of reported bugs
- Mentored interns in software development, providing guidance on frameworks, coding practices, and business logic.

PROJECTS

Pet Stat Capstone

- Created wireframes based on stakeholder feedback, ensuring design alignment with project objectives and user needs.
- Worked closely with cross-functional teams to successfully meet project milestones and deliverables on time.
- Developed a React Native app that optimized daily operations for a veterinary clinic, enhancing communication between doctors and clients and streamlining the process for clients to monitor their pets' medication usage.
- Implemented strong security protocols using Microsoft Authenticator, safeguarding user data and ensuring compliance with industry standards.

Discord League of Legends Helper Bot

- Designed and developed a Discord bot using Python (discord.py) to integrate with the Riot Games API.
- Implemented user registration with input validation, preventing duplicate entries and persisting data in JSON storage.
- Integrated Riot API to validate accounts, track player activity, and fetch live match data.
- Built a background task system to detect when a registered user enters a League of Legends game and automatically notify them via direct message a recommended build for the champion they are playing.
- Implemented external API integration with Riot's Data Dragon to map champion IDs to human-readable champion names.

EDUCATION

Arizona State University

Tempe, Arizona

Bachelor of Science in Computer Science

2023

Pima Community College

Tucson, Arizona

Associate of Science

2020

INTERESTS

- Rock Climbing, Video Games, Paintball, Camping, Fishing, Building Legos, Building Computers
